B3
11. (Currently Amended) The crimping pliers of claim 5 6 in which said auxiliary handle is of U-shaped cross section so that it can fit around said one of said first and second handles handle of said pair in an extreme rotational position, so as not to interfere with the final closing of said crimping pliers.

B4
12. (New) Crimping pliers which comprise:
a first handle and second handle;
said first handle connecting to a first jaw portion at an end of said first handle;
said second handle connecting to a second jaw portion at an end of said second handle;
said first jaw portion and second jaw portion being interacting to form a pliers jaw for crushing cable/wire crimps positioned between said interacting jaw portions;
said first jaw portion comprising a first wall and a second wall laterally spaced from said first wall, said first and second walls defining a crimp space therebetween;
said first wall having a first crimp-retaining prong;
said second wall having a second crimp-retaining prong;
